## INVITATION

It gives us immense pleasure to invite you for the National Seminar on Occupational Health and Workshop on Pre-hospital trauma Care in Occupational Injuries. Each year occupational injuries and illnesses cause employers, workers, and society to pay tremendous costs for workers' compensation and other insurance, medical expenses, lost wages and productivity. Understanding of etiology of occupational injuries may lead to reduction in rate of occurrence of these avoidable injuries.

The Seminar will give an opportunity to understand the status of Occupational Health in various States and learn from the good practices. This seminar is a step forward towards goal of mainstreaming occupational health in health care system. The seminar will bring together the public health professionals, executives from various industries for a common cause at a platform where they will be enlightened by the experts of the field regarding updates and sensitization about legislation, administration and management. The expected outcome of the Seminar would be to establish a National level Occupational Health Surveillance System.

Workshop is an opportunity to advocate for stronger health systems to ensure expertise in pre-hospital trauma care i.e. care delivered during the pre-hospital phase (i.e., before arrival at a hospital). Workshop on pre hospital trauma care will highlight an opportunity and attempt to bring reduction in occupational injuries and sensitization of the health care professionals regarding importance of pre hospital trauma care.
